Implement Client Script & UI Policy (Incident)

Problem Statement

Incident records often require consistent and accurate data entry to ensure effective triage, routing, and resolution. However, relying solely on user awareness and manual checks can lead to incomplete, inconsistent, or incorrect data being submitted. This can impact reporting accuracy, SLA compliance, and overall service quality. To address this challenge, there is a need to enforce conditional field behavior and validation directly at the user interface level. Implementing standardized UI Policies and Client Scripts helps control field visibility, mandatory status, and save-time validation, ensuring that Incident records meet defined business rules before they are submitted**.**

Objective

The objective of the Implement Client Script & UI Policy (Incident) project is to demonstrate how ServiceNow client-side controls can be used to enforce data integrity on Incident records. This implementation showcases how UI Policies and Client Scripts can dynamically make fields mandatory, auto-populate values, control field behavior, and prevent record submission when required conditions are not met. The solution ensures that Incidents are created with complete and valid information, improving data quality and consistency across the platform.

Skills

Incident Management
UI Policy
UI Policy Actions
Client Scripts
Form Validation

Task 1: Create UI Policy on Incident

Activity 1: Create UI Policy

1. Log in to the **ServiceNow instance** with administrative or configuration access.

2. Navigate to:
   System UI → UI Policies

3. Click **New** to create a new UI Policy record.

4. Fill in the following details:

    - **Name**: High Impact Control
      This name clearly represents the purpose of the policy, which is to apply additional controls when an Incident has a high impact.

    - **Table**: Incident
      Specifies that the UI Policy applies to Incident records.

    - **Active**: true
      Enables the UI Policy so it is enforced on the Incident form.

5. Configure the **Conditions** section as follows:

    - **Field**: Impact

    - **Operator**: is

    - **Value**: 1 – High

6. This condition ensures the UI Policy is triggered only when the Incident impact is set to High.
7. And Ui policy action Assignment group
8. Check mandatory

9. Set **Reverse if false** to **true**.
   This ensures that when the condition is not met, any field changes applied by the policy are automatically reverted.

10. Review the configuration to ensure accuracy.

11. Click **Submit** to save the UI Policy.
