Task 2: Create UI Policy Action – Urgency

Activity 1: Configure the Urgency Field

1. **Open the UI Policy Actions**
   Go to the **High Impact Control** UI Policy you created earlier. Scroll down to the **UI Policy Actions** related list. This is where you define the specific behavior of fields when the policy conditions are met.

2. **Create a New Action**
   Click **New** to create a UI Policy Action. This lets you configure how individual fields behave when the UI Policy is triggered.

3. **Fill in the Action Details**

   - **Field name:** Urgency
     Select the **Urgency** field on the Incident form. This is the field you want to control.

   - **Read-only:** true
     Check this option to make the Urgency field read-only whenever the UI Policy condition is met (Impact = High). Users will be able to see the field but cannot change its value.

   - **Visible:** Leave this field as is (do not change).
     By leaving it unchanged, the field will remain visible on the form, but its behavior will be controlled by the Read-only setting.
