

Activity 3: Reverse Condition Test

1. **Open an Existing Incident:**
   Go to Incident → Open and select an Incident where **Impact** is currently set to **High**.

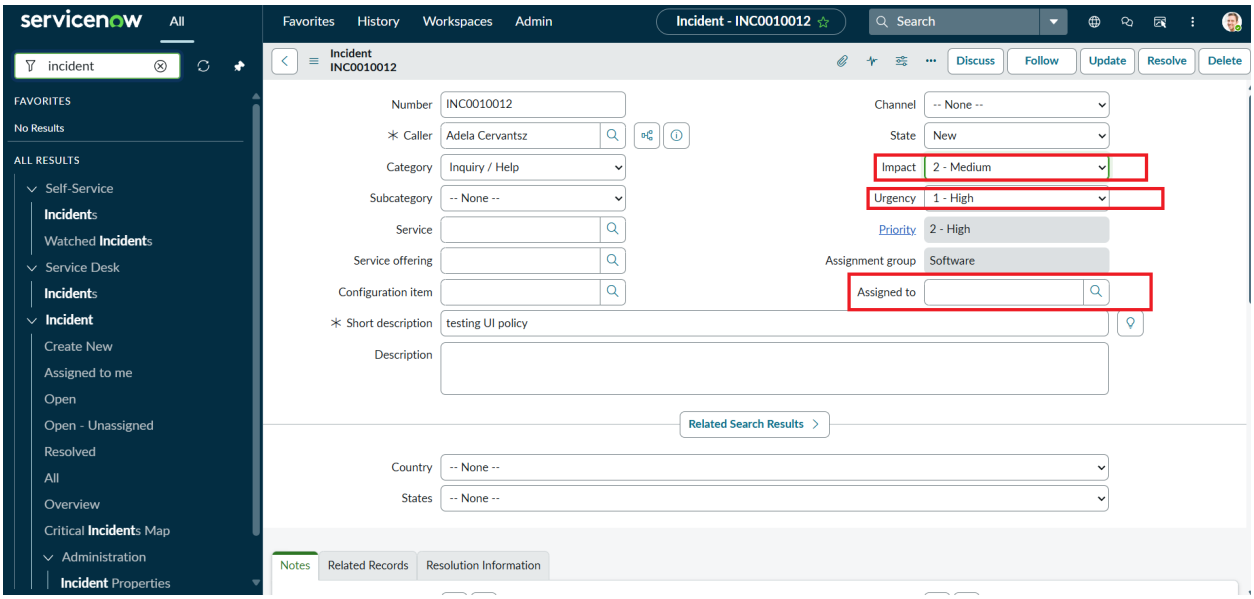

2. **Change Impact:**
   Update the **Impact** field from **High** to **Medium**. This will test the **Reverse if false** functionality of your UI Policy and the behavior of your Client Scripts.

3. **Verify the Field Behavior:**

   - **Assigned To** should no longer be mandatory.

   - **Urgency** should now be editable, meaning the read-only UI Policy action is reversed.

4. **Save the Record:**
   Click **Submit** to save the changes. The record should save successfully without errors, confirming that the reverse condition works as intended.

Activity 4: Test List Edit Blocking

1. **Navigate to the Incident List:**
   Go to Incident → All to view all Incident records in a list view.

2. **Attempt a List Edit:**

   - Locate any Incident in the list.
   - **Double-click the State field** to try editing it directly from the list.

3. **Verify the Behavior:**

   - An **alert message** should appear, indicating that direct changes to the State field are not allowed.
   - The **State value should remain unchanged**, confirming that the onCellEdit Client Script is working correctly.
