

Activity 5: Test Form-Based Update

1. **Open the Incident Record:**
   Navigate to the same Incident record you used in previous tests.

2. **Change the State:**
   On the **Incident form**, update the **State** field to a new value. This tests that changes via

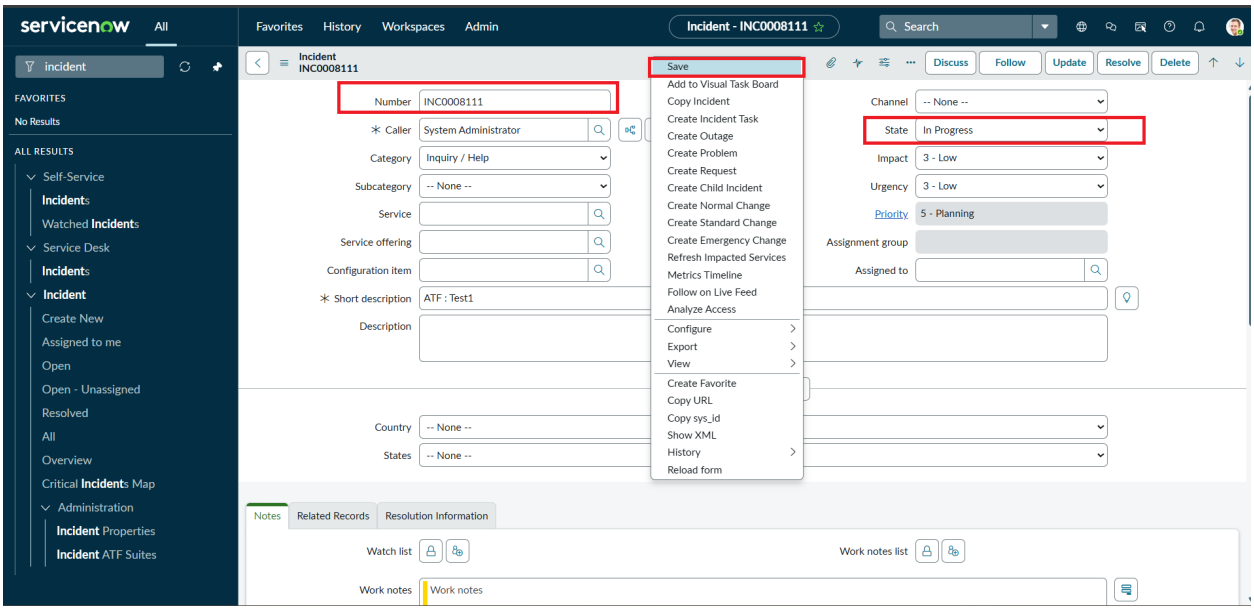

the form (not the list) are allowed.

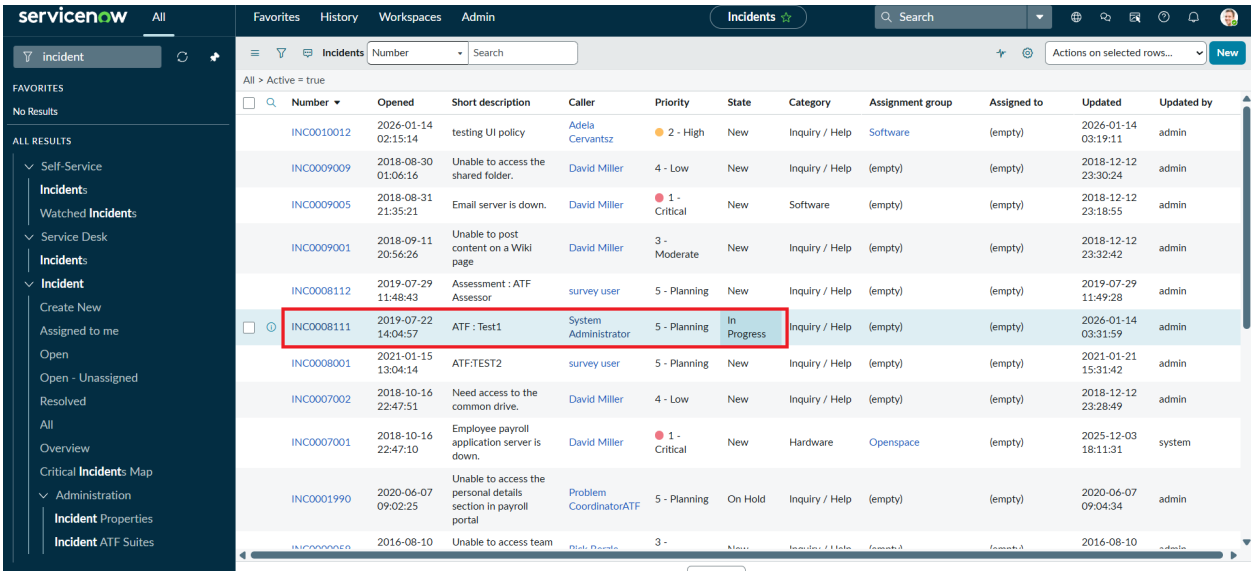

3. **Click Update:**
   Save the record by clicking **Update**.

4. **Verify the Result:**

   - The **State change should be saved successfully**.

   - Confirm that other fields, such as **Assigned To** and **Urgency**, still follow the configured UI Policy and Client Script rules.

Conclusion

The Implement Client Script & UI Policy (Incident) micro project effectively demonstrates how **UI Policies** and **Client Scripts** can work together to enforce dynamic field behavior, automate updates, and prevent incorrect data submission on Incident forms. By using onChange, onSubmit, and onCellEdit scripts alongside UI Policy actions, the project ensures fields like **Assigned To** and **Urgency** respond appropriately to changes in **Impact**, maintaining clean and consistent data. This solution not only enforces mandatory fields and controls user interactions but also remains lightweight, efficient, and easy to implement, making it ideal for short-duration micro projects while showcasing practical best practices for improving form usability and data integrity in ServiceNow.
